Highlights of a Montana Rifle:

- Claw Extractor
- Mauser style Ejector
- Winchester M70 3-Position Safety - Position 2 allows bolt to move while on safe and Position 3 locks bolt
- Winchester M70 Pre-64 adjustable trigger
- Mauser 98 style inner collar ring - doesn't require an extractor cut in the barrel or cone breeching within the barrel
- Controlled Round Feed - doesn't require chambering a round to have extractor grasp case head for control
- 5-Gas Vent System - will push gases away from the shooter's face for superior safety in case of catastrophic failure
- SAAMI specification chambers
- 1" Pachmayr Decelerator butt pad
- 13 5/8" length of pull
- 38 calibers available in Production Rifle lines
- Drilled & tapped for Winchester M70 Post-64 Classic two-piece base
- Left and Right Hand for most models
- Chrome Moly and Stainless Steel offered
- Will customize Production Rifles through the Custom Shop

For accuracy:

- Three solid points of contact mating the barrel to the receiver – receiver C-ring to barrel breech face, the threads and the receiver face to the barrel shoulder
- Heavier barrel shank to reduce barrel whip
- All rifles are glass bedded
- All rifles have free floated barrels
- Button rifling
- Stress relieved barrels
- Barrels are button rifled and hand-lapped

Aftermarket:

- Timney aftermarket triggers for Winchester M70 work in our rifles
- Winchester M70 stock will fit our Barreled Actions
- Worst acceptable accuracy is 1 MOA – most customers reporting accuracy experience ¼ to ¾ MOA.
- We've shot our Montana Tactical Rifle (MTR) Production Rifle out to 1900 yds and it is a ¼ MOA rifle.
